

# Google Hacking Cheat Sheet

## Advanced Querying

Query	Description & Example
inurl:	Value is contained somewhere in the url. Ex: "preventing ransomware <b>inurl:fbi</b> "
site:	Only search within this website's given domain Ex: "windows xp end of life <b>site:microsoft.com</b> "
filetype:	Search only for files, not webpages Ex: "nasa moon landing <b>filetype:JPG</b> "
allinurl:	Search all of the following words in the url. Ex: <b>allinurl: "blog wordpress"</b> information security
intext:	Search the body of the webpage for specific text. Ex: patient record <b>intext:"index of /htdocs"</b>
related:	Find website results that are related to your search term. Ex: <b>related:sans.org</b>
info:	Find supplemental information Google may have on this page (useful for finding cached pages) Ex: <b>info:www.usgs.gov</b>
link:	Find other pages indexed by Google that reference this link Ex: <b>link:http://www.somecompany.com/supersecretfile.doc</b>
"quote"	Find an exact phrase (though results may include related words) Ex: <b>"Malware Hunting"</b>
+word	Show results with this word exactly. Do not include similar words. Ex: <b>Malware +Hunter</b>
-word/query	Do not include this word in search results or queries. Ex: <b>Advanced Malware Hunting -beginner -introduction -site:microsoft.com</b>
"word * word"	Wildcard. Search for anything between these two words, but include both. Ex: <b>"Next * Firewalls with *"</b>
OR (or   )	Return results for either item. The pipe character can be used in place Ex: <b>"locky OR ransomware"</b> ; Ex: <b>"locky   ransomware"</b>
AND (or &)	Return results with both items. Ampersand character can be used in place. Ex: <b>"cissp AND certification"</b> Ex: <b>"cissp &amp; certification"</b>
Remember, the real power comes in stringing multiple advanced operators together. <b>("Index Of"   "[To Parent Directory]") AND "**financ*" inbody:xlsx site:somebank.com</b>
